

National Severe Weather Warning Service

Chief Forecasters Assessment

Ice is more likely where snow has fallen over the Pennines today and where surfaces left damp from any overnight showers. There remains some uncertainty to the timing and extent of ice due to cloud amounts. There may also be some freezing fog patches.

The Met Office have issued a **Yellow Warning of Ice**

Valid from **18:00 on Wed, 09th Nov 2016** until **09:00 on Thu, 10th Nov 2016**

Under clear skies and light winds, temperatures are expected to fall below freezing this evening and overnight. Given that roads are likely to be still damp from earlier rain and snow, icy patches are expected to form on untreated surfaces.

Please be aware that some localised disruption to travel is likely.
